## **DETAILED ACTION**

### ***Response to Amendment***

1. Applicant's request for reconsideration of the finality of the rejection of the last Office action is persuasive and, therefore, the finality of that action is withdrawn.

### ***Allowable Subject Matter***

2. The indicated allowability of claim 33 (now incorporated into claim 26) is withdrawn in the light of the current specification. Rejections of the pending claims follow.

### ***Claim Rejections - 35 USC § 112***

3. The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

4. Claims 26-27, 29-32, 34 are rejected under 35 U.S.C. 112, first paragraph, as failing to comply with the written description requirement. The claims contain subject matter, which was not described in the specification in such a way as to reasonably convey to one skilled in the relevant art that the inventor, at the time the application was filed, had possession of the claimed invention.

Claim 26 recites the following limitation "the intensity of the heater element in the center along the width of said film is higher than two ends" (emphasis added), which is

not supported by the specification. In fact, the teaching of the adjustment of the intensity of the heater elements is found at paragraph [0036] of the current disclosure:

[0036] "FIG. 3A shows an example of the constitution of the heater 54, and FIG. 3B shows heating temperature distribution characteristics thereof. The temperature distribution of the heater 54 in the axial direction is kept constant by adjusting the number of windings (winding intensity) of a heater element 54a, the winding intensity being made coarse in the center and more intense toward the two ends. As a result, the temperature distribution of the heater 54 is constant in the axial direction."

The above statement indicates that the center of the heating unit comprises a *smaller* number of windings of the heater elements than that of the two ends of the heating unit. As it is conventionally known, the resistance value of the heating unit –and thus the heat intensity- is proportional to the number of the windings of the heater elements, e.g., the smaller the number of windings the lower the resistance being provided, and thus the lower heat intensity is generated. In other words, the disclosure states that the intensity of the heater element in the center along the width of the film is smaller than the two ends, a contradiction to that is being claimed in claim 26.

The dependent claims 27, 29-32 and 34 inherit the same claimed elements of the base claim 26, and are therefore rejected for the same reason.

Appropriate correction is required.

***Response to Arguments***

5. Applicant's arguments with respect to claims 27, 29-32 and 34 have been considered but are moot in view of the new grounds of rejection as presented in this Office action.
